ABSTRACTED-PUB-NO: WO2003026464A

BASIC-ABSTRACT:

NOVELTY - The flower/plant container assembly (10) comprises a container (11) and a circular tray (12). The container has an open upper end and a closed lower end so as to contain water. The tray is larger than the container and includes a recess to receive the lower end of the container for locating the container centrally on the tray. The container has a waist to locate a ribbon or tie (25) for attaching sheet wrapping (23,24) about the container assembly to form the packaged container assembly. The container is of circular cross-section and may include a platform or support raised above the lower end of the container for supporting a foam flower supporting block. When the container is used for growing plants, the roots of the plants wrapped in plastic film may be located within the container, where the block is not used in this case. The plant pot or ball of soil may be seated on the a platform and water placed in the container.

USE - For flowers, floral arrangements or growing plants.

ADVANTAGE - Provides stable and aesthetically pleasing container assembly which allows the plants in transport to be watered without causing damage due to moisture.

DESCRIPTION OF DRAWING(S) - The figure shows a packaged or

wrapped container
assembly.
